

HARSH SINGH

Java Full Stack Developer

Bengaluru, Karnataka, India | hssingharsh6@gmail.com | +91-6393511167 | LinkedIn | GitHub

SUMMARY

Java Full Stack Developer with 2+ years of professional experience building and scaling web applications end to end. Backend APIs in Spring Boot (including breaking apart a monolith into microservices), frontend in React, and everything in between. Comfortable owning a feature from database schema to UI, with a focus on security (JWT, RBAC) and clean, maintainable code. Currently at Further Grow, where I work across the stack on a production system used daily by real customers.

SKILLS

Backend: Java, Spring Boot, Microservices, REST APIs, Spring Security, JWT, RBAC, Hibernate

Frontend: React.js, JavaScript, React Hooks, React Router, Axios, Responsive UI

Database: MySQL, PostgreSQL, Redis, Schema Design, Query Optimization

Cloud & DevOps: AWS (EC2, S3), Docker, CI/CD, Maven

Testing & Practices: JUnit, Swagger, Postman, Git, GitHub, Agile/Scrum, SOLID Principles

WORK EXPERIENCE

Java Full Stack Developer, Further Grow

furthergrow.com

May 2024 – Present

- Fixed slow endpoints by rewriting queries and cleaning up the schema; response times improved by around 35% on the ones I touched.
- Split parts of the monolith into smaller Spring Boot microservices, communicating over REST, to make deployments less risky.
- Added Redis caching in front of frequently-hit read endpoints to cut down repeated database load.
- Built secure REST APIs with Spring Security, using JWT for auth and RBAC to control what different user roles can do.
- Dockerized the services and deployed them on AWS EC2, with static assets and file storage on S3.
- Wrote JUnit tests for core service and API logic to catch regressions before they hit production.

PROJECTS

FlowSpace Workforce Management Platform

flowspace.co.in

Java, Spring Boot, Spring Security, JWT, React.js, MySQL, REST APIs

- Built a workforce and workflow management platform to replace manual, spreadsheet-based approval processes.
- Designed REST APIs for task assignment, workflow approvals, and employee operations, integrated with the React frontend via Axios.
- Built React Router-based navigation and form-driven workflows for task creation, approval, and status updates.
- Built dashboards for task status, workflow progress, and team performance tracking.

CloudBillBox: Billing, POS, Inventory & Collections Platform

cloudbillbox.com

Java, Spring Boot, Spring Security, React.js, JWT, MySQL, RBAC, Multi-tenant Architecture

- A multi-tenant billing platform: invoicing, POS, inventory, and payment collection all sharing one ledger instead of separate tools.
- Set up RBAC with custom permission overrides so an Owner, Accountant, and Cashier each see and can do different things.
- Built the POS side: barcode scanning, stock deducts in real time, handles multiple payment types, credit notes and returns.
- Handled payment failures and retries carefully so a customer's money didn't get lost or double-charged when a payment attempt failed midway.
- Exposed a public API (scoped keys, HMAC-signed webhooks) plus a small operator console for managing tenants and plans.

EDUCATION

B.Tech in Computer Science Engineering

2020 – 2024

Veer Bahadur Singh Purvanchal University
